## Global forest health declining, exacerbated by climate change

Temperature peaks & droughts

Forest pests

Forest diseases

Severe weather

Traditional inspection methods are unscalable, leading to **late detections**

**203 million hectares of forests degraded, 11 million hectares deforested annually**

→ Loss of timber & forest value

→ Loss of biodiversity

→ Loss of carbon storage

LiveEO continuously monitors your forests to **identify threats early on**, enabling you to take **countermeasures**

LiveEO 

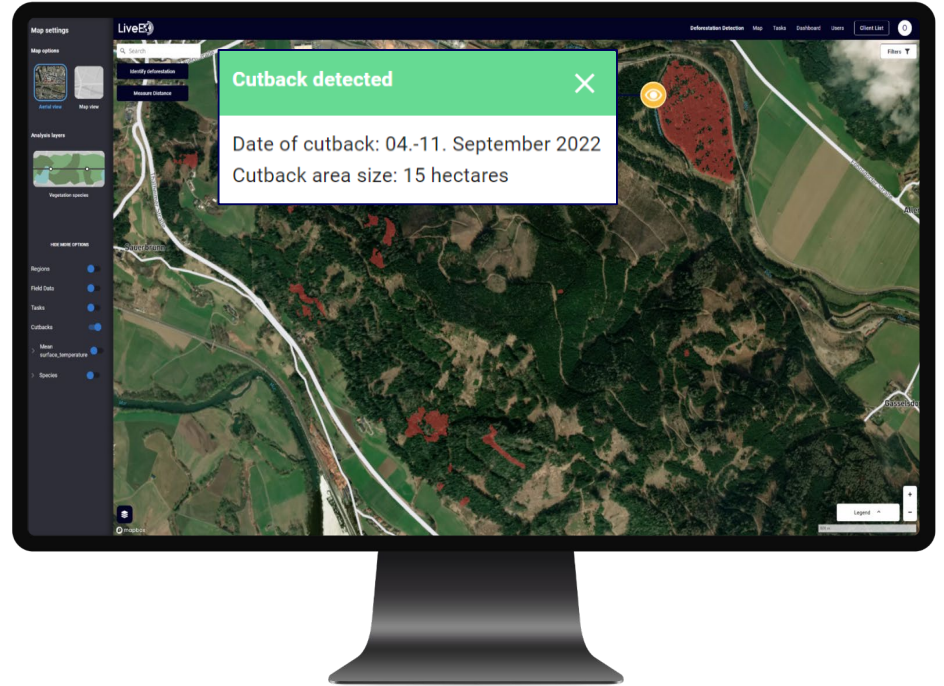

# Triggers inform you directly about health threats

- + Reduce tree loss
- + Focus ground teams
- + Reduce manual efforts

# Automated cutback detection with additional insights

- + Actionable Insights
- + Fully automated
- + Scalable

# From satellite data and ML to actionable insights on forest threats
